WEB: <http://www.terrenum.net>

General Manager: Edward Someus

May 26, 2008

The 3R EU-FP5 Multi Fuel applied research project and pilot plant test operations successfully ended in August 2005. The extensive engineering scale up works continued in 2006 and 2007, which resulted, that the 3R technology passed from late phase of applied scientific research phase to industrial demonstration phase. Solid bridge between science and economical industrial application (industrial design & practice) has been established and detailed worked out.

**The 3R technology is an original, patented and
intellectual property right protected industrial engineering solution.**

The 3R technology has been licensed by sole inventor Edward SOMEUS to an British - American environmental clean technology organization VERTUS Ltd. (a subsidiary to NviroCleanTech Ltd.) in 2007 with clear objective to build up solid fuel pretreatment Clean Coal global network for energetic applications for the solid fuel power generation industry up to 300 MWe power capacity, including manufacturing of 3R energy industrial equipments. The first 3R international industrial demonstration plant is under construction in 2008/2009 with 30,000 t/year throughput capacity.

3R Environmental Technology London Stock Exchange list symbol: NVR
